A: g.1947dupTCAGCCTGGACGGTGCGGATTCCGC

B: g.1086delC

C: g.1155del9CGCGCGGC
Supplementary Figure S1. Electropherograms depicting the 5 FOXC1 mutations observed in PCG. The wild type sequences are indicated above the observed sequence. The mutations are as follows - Panel A: g.1947dup25bp; Panel B: g.1086delC; Panel C: g.1155del9bp; Panel D: His128Arg; Panel E: Cys135Tyr. The red boxes indicate the region(s) of duplication, deletion and point mutation in the wild type sequence. The arrows in the last two panels indicates the point of substitution.
