**Supplementary Figure S2.** The FOXC1 missense mutation His128Arg (CAC>CGC) in PCG209 family. The arrow head in the chromatograms indicate the point of substitution. The proband (II:2) was heterozygous for the mutation, whereas his father (I:1) and mother (I:2) did not harbor this change. DNA sample from his unaffected sib (II:1) was not available for analysis. The ages and genotypes of these individuals are indicated below their symbols.
