Supplementary Figure S1. Specificity of antibodies against AMPA subunits GluR1, GluR2/3 and GluR4. Western blot analysis was done in the postsynaptic density of the pig brain cortex (PSD) and the crude extract of the rabbit cortex (Cx) probed with GluR1, GluR2/3, and GluR4 antiserums used in this study. These antibodies against GluR1, GluR2/3, and GluR4 recognized proteins with molecular weights of ~110 kDa in the brain tissues of both pig and rabbit.
