**Fig. S3.** ERG phototransduction parameters. **(A)** Mean ratios (treated/non-treated) for $R_{\text{maxP3}}$ amplitude (blue symbols/lines) and $S$ (black symbols/lines) at 1-12 months post-surgery normalized to pre-surgery baseline (0 months). **(B)** Difference in $\tau_d$ between treated and untreated eyes between 1-12 months post-surgery.
