Supplementary Figure S1. MARINA: The least squares mean change in National Eye Institute Visual Function Questionnaire-25 (NEI VFQ-25) scores for patients who gained ≥15 letters, gained or lost <15 letters, and lost ≥15 letters for 8 vision subscales of driving (A), role difficulties (B), mental health (C), general vision (D), social functioning (E), color vision (F), peripheral vision (G), and ocular pain (H) at 12 months. Error bars represent 95% confidence interval of the mean. * Driving ≥15 letters gained (n = 137), <15 letters change (n = 394), ≥15 letters lost (n =92); social function ≥15 letters gained (n = 151); color vision ≥15 letters gained (n = 149), <15 letters change (n=440); peripheral vision <15 letter change (n = 443), ≥15 letters lost (n = 113).
