Supplemental Figure 4- Non-colocalization of GFAP and BrdU in the dysplastic \textit{ptc2^{\text{-/-}}} retina.

Immunohistochemical detection of GFAP after BrdU incorporation in WT;\textit{gfap:GFP} (A) and \textit{ptc2^{\text{-/-}};gfap:GFP} (B) retinas revealed ectopic BrdU+ cells and GFAP antibody staining in the dysplastic \textit{ptc2^{\text{-/-}};gfap:GFP} retina. However, no colocalization of BrdU and GFAP is observed in these regions. Scale bars 50um (A,B).
