Supplementary Fig. S1. The expression levels of miR-124 in RPE cells treated with TGF-β1 for the indicated amount of time, as determined by qPCR analyses. The expression levels of miR-124 were normalized to those of miR-16.
Supplementary Fig. S2. Relative expression level of miR-124-3p in the absence or presence of TGF-β1 (10 ng/mL) in a primary human RPE cell line (normalized by RNU6 (A) and miR-16 (B) expression).
