Supplementary Figure S5. Effects of SERPINA3K on the mRNA levels of VEGF isoforms.

ARPE19 cells were exposed to 2% O₂ in the absence or presence of 100 nM SERPINA3K overnight. Real-time PCR was performed to quantify the relative mRNA levels of total VEGF (A), VEGF165a (B) and VEGF165b (C) using specific primer pairs. Values are mean±SD, n=3. * P<0.05.
