FIGURE S11: Representative retinal sections at 6 anatomical positions in the retina (superior-central, superior-mid-peripheral, superior-peripheral, inferior-central, inferior-mid-peripheral and inferior-peripheral). Animals were sacrificed at (a) 1 week, (b) 4 weeks and (c) 12 weeks post-operation. The subretinal layer thickness of IPL, INL, OPL and ONL were measured. The nuclei number of INL and ONL were counted.
