Supplemental Figure 1. Clinical presentation of iris melanomas with corresponding mutations.
Supplemental Figure 1 Clinical presentation of iris melanomas with corresponding mutations

Clinical pictures of iris melanoma (A-D) with the corresponding identified activating mutations in GNAQ and GNA11 (E-H). In tumors C and D the additionally identified EIF1AX mutations are demonstrated under the identified GNA11 and GNAQ mutations. The annotation is according to human genome assembly 19 (hg19).
