Supplementary Figure S1. Scotopic and photopic implicit times of ERG a- and b-waves in D2R-KO (A and B), D2R antagonist sulpiride (C and D), D1R-KO (E and F) and D1R antagonist SCH39166 (G and H) treated mice. WT, wildtype; KO, knockout. No significant differences in the implicit times of the a- and b-waves were observed for either genetic KO or pharmacologic antagonist treatment (Repeated measures ANOVA, SE, standard error of the mean).
